

scalable microchips for various biomedical applications. The subsequently ambition is to use this system as a mini laboratory that has benefits in cell sorting, pharmaceutical, patch clamp, and fertilization experiments where the gaseous and the biochemical content is of importance.

Acknowledgments

This work was supported by EU Structural fund, Objective 2, Norra Norrland, the Swedish Research Council, and the Kempe Foundation. The authors would like to thank Dr. Johan Borg and Mikael Larsmark at Luleå University of Technology for valuable input.
